Total Maximum Daily Load Information Sheet

Straight Fork

Waterbody Segment at a Glance:

County: Morgan
Nearby Cities: Versailles
Length of impairment: 1.1 miles
Pollutant: Volatile Suspended Solids (VSS)
Source: Versailles Wastewater Treatment Plant (WWTP)

State map showing location of watershed

TMDL Priority Ranking: High

Description of the Problem

Beneficial uses of Straight Fork

- Livestock and Wildlife Watering
- Protection of Warm Water Aquatic Life
- Protection of Human Health associated with Fish Consumption

Use that is impaired

- Protection of Warm Water Aquatic Life

Standards that apply

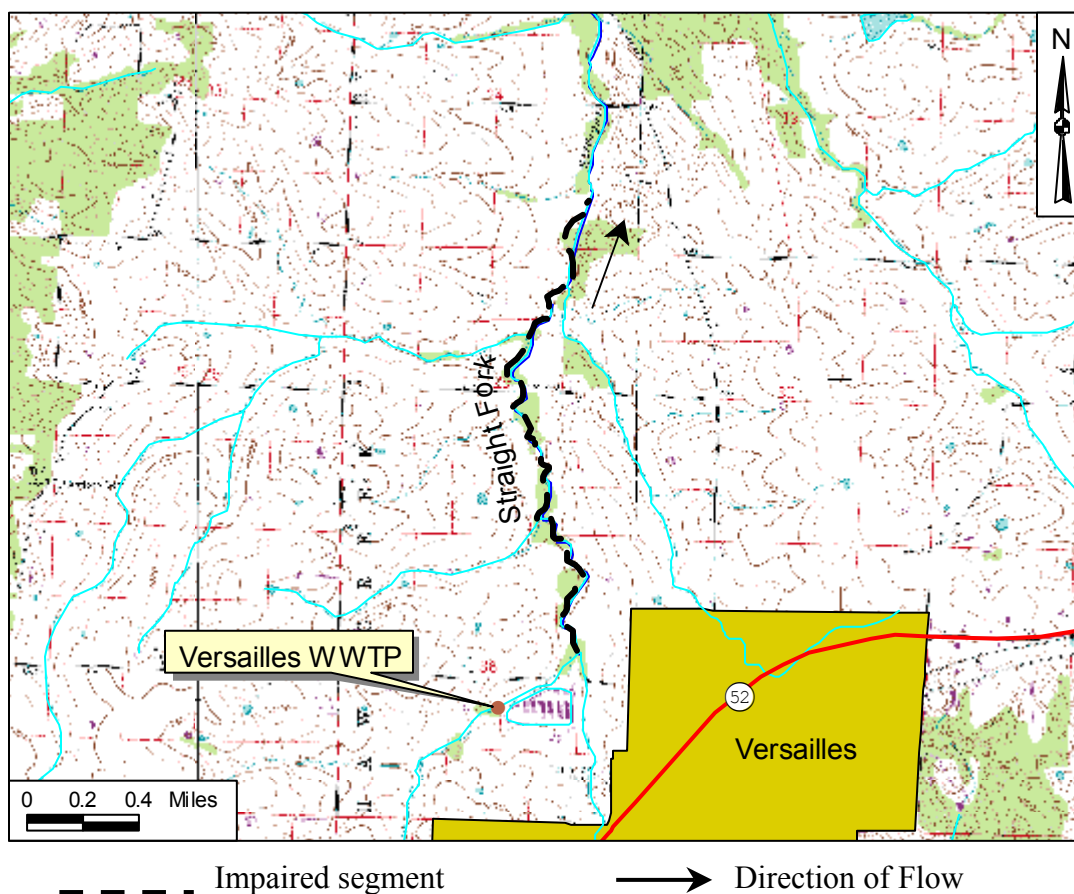

- The impairment is based on exceedence of the general criteria contained in Missouri's Water Quality Standards, 10 CSR 20-7.031 (3)(A) and (C). These criteria state:
 - Waters shall be free from substances in sufficient amounts to cause the formation of putrescent, unsightly or harmful bottom deposits or prevent full maintenance of beneficial uses.
 - Waters shall be free from substances in sufficient amounts to cause unsightly color or turbidity, offensive odor or prevent full maintenance of beneficial uses.

Background information

Any waterbody that was listed for Non-filterable Residue (NFR) in 1998, such as Straight Fork, is now being listed for Volatile Suspended Solids (VSS). This change was made to better distinguish between organic solids coming from wastewater treatment plants (VSS) and mineral solids (soil or mineral particles) coming from soil erosion or erosion of mine waste materials or stockpiles (Non-Volatile Suspended Solids or NVSS).

Straight Fork shows excessive suspended algae due to discharges from the stormwater basin of the Versailles Wastewater Treatment Plant (WWTP). VSS refers to particles that are suspended in water, like the algae in Straight Fork, or those that settle out, like sewage sludge. Suspended algae block sunlight and reduce dissolved oxygen in the water. Many aquatic organisms require high levels of oxygen to survive. Excess algae also cause unsightly color in the water and increased turbidity. Like all wastewater discharges in Missouri, the Versailles WWTP is required to meet specific limits contained in a discharge permit issued by the Missouri Department of Natural Resources. By making changes to the conditions of the discharge permit, the quality of the plant discharge will be improved and result in improvements in Straight Fork. The department plans to make a water quality study of Straight Fork in 2004 to help determine just what those limits should be.
